Anomaly mitigation: Not applicable
Deregister
Register targets
Target groups route requests to individual registered targets using the protocol and port number specified. Health checks are performed on all registered targets according to the target group's health check settings. Anomaly detection is automatically applied to HTTP/HTTPS target groups with at least 3 healthy targets.

6. Push the application load balancer logs to S3.

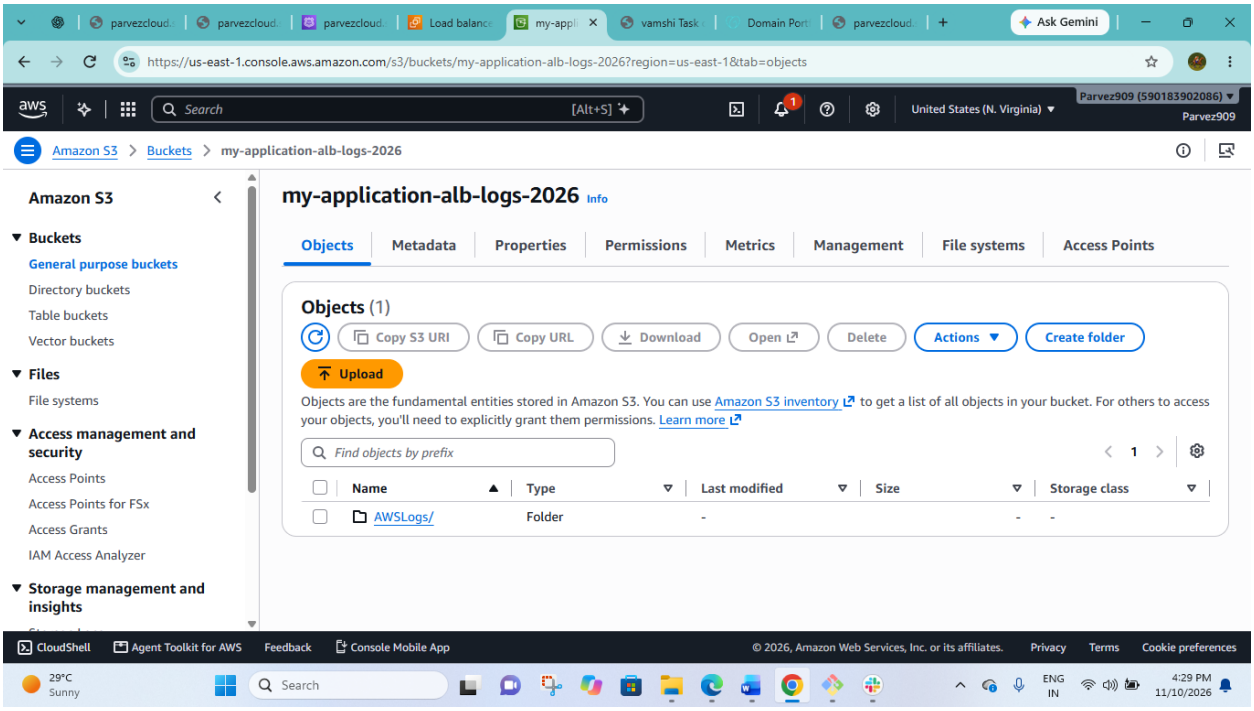

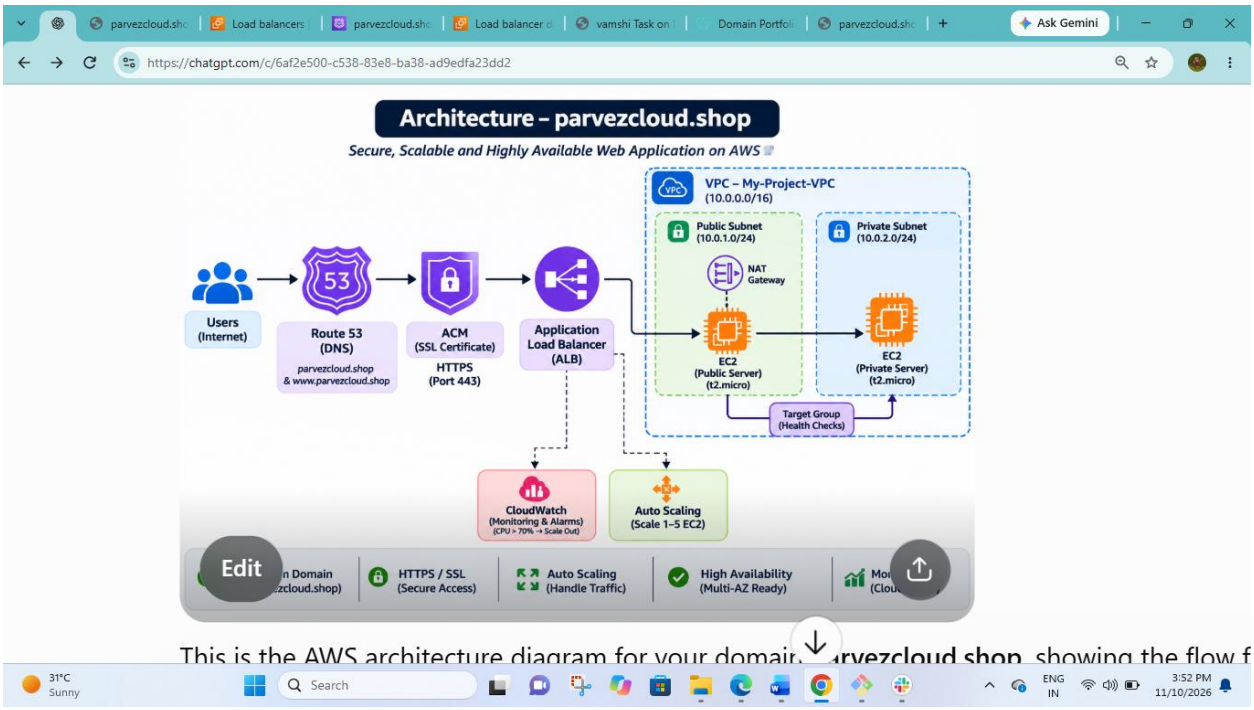

Go to permission tab

Bucket policy → Edit page

Edit load balancer attributes
EC2 > Load balancers > My-Application-LB > Edit load balancer attributes
Protection
Deletion protection
To prevent your load balancer from being deleted accidentally, turn on deletion protection. If you turn on deletion protection, you must turn it off before you can delete the load balancer.
Deletion protection
Logging
All legacy logs are stored in S3. If no prefix is specified, logs are stored in the bucket root.
Access logs - legacy
Access logs deliver detailed logs of all requests made to your load balancer. Additional charges apply. Learn more
S3 URI
s3://my-application-alb-logs-2026
View
Browse S3
Format: s3://bucket/prefix
Connection logs - legacy
Connection logs deliver detailed logs of all connections made to your load balancer. Additional charges apply. Learn more
Health check logs - legacy
Health check logs deliver detailed logs of health checks for all targets in your load balancer's target groups. Additional charges apply. Learn more
Logging options
Log delivery to CloudWatch, Kinesis Firehose, and S3 is configurable through an integration with Logging - by Amazon CloudWatch. Visit Logging in the Integrations tab.
